LOXEAI · BOLNA SYMPHONY BUILDATHON

Sworn

Say it.
Sworn checks if it's true.

A voice agent that interviews the people who run security controls and checks every claim against the real systems before an auditor does.

Priya, platform lead · on a call with Sworn

"MFA is enforced for everyone through Okta."

IAM report: **jsmith-contractor** has console access, no MFA, and its key was used **4 days after** offboarding.

NOT TRUE

THE PROBLEM

Your best engineer is working as a translator.

Engineers say

"We nuked the stale IAM users and the SCP blocks it anyway."

`IAM · Terraform · PRs · Okta`

weeks of back-and-forth

Auditors need

"Show me the population for CC6.2 and every exception."

criteria · populations · samples · exceptions

88%

of SOC 2 exams needed at least one extra round of evidence requests

71%

ended with at least one exception

#1

post-selection delay for 50% of enterprise software buyers is the security review

Lazarus Alliance 2026 SOC 2 benchmark (75 exams, audit-firm data); G2 2026 Buyer Behavior Report (n=1,038).

WHY NOW

More frameworks, more scrutiny, and voice that finally works.

AI companies sell to enterprise

Every enterprise deal now opens with a security review.

SOC 2 ISO 27001 ISO 42001 EU AI Act DPDP FedRAMP 20x

Frameworks multiply

Each one asks the same questions in a different dialect.

FABRICATED?

Trust in AI compliance cracked

2026's evidence-fabrication allegations against an AI compliance startup left auditors wanting proof, not prose.

200k+

Voice agents are production-ready

Bolna runs 200,000+ calls a day in 10+ languages.

Delve allegations, Mar 2026 (company denies); Bolna/TechCrunch, Jan 2026.

THE SOLUTION

Sworn interviews, checks, translates and seals.

Listen
calls the owner at quarter end or on drift

Type
each statement becomes a typed claim

Verify
against IAM, Okta, GitHub, tickets

Push back
asks what an auditor would ask, live

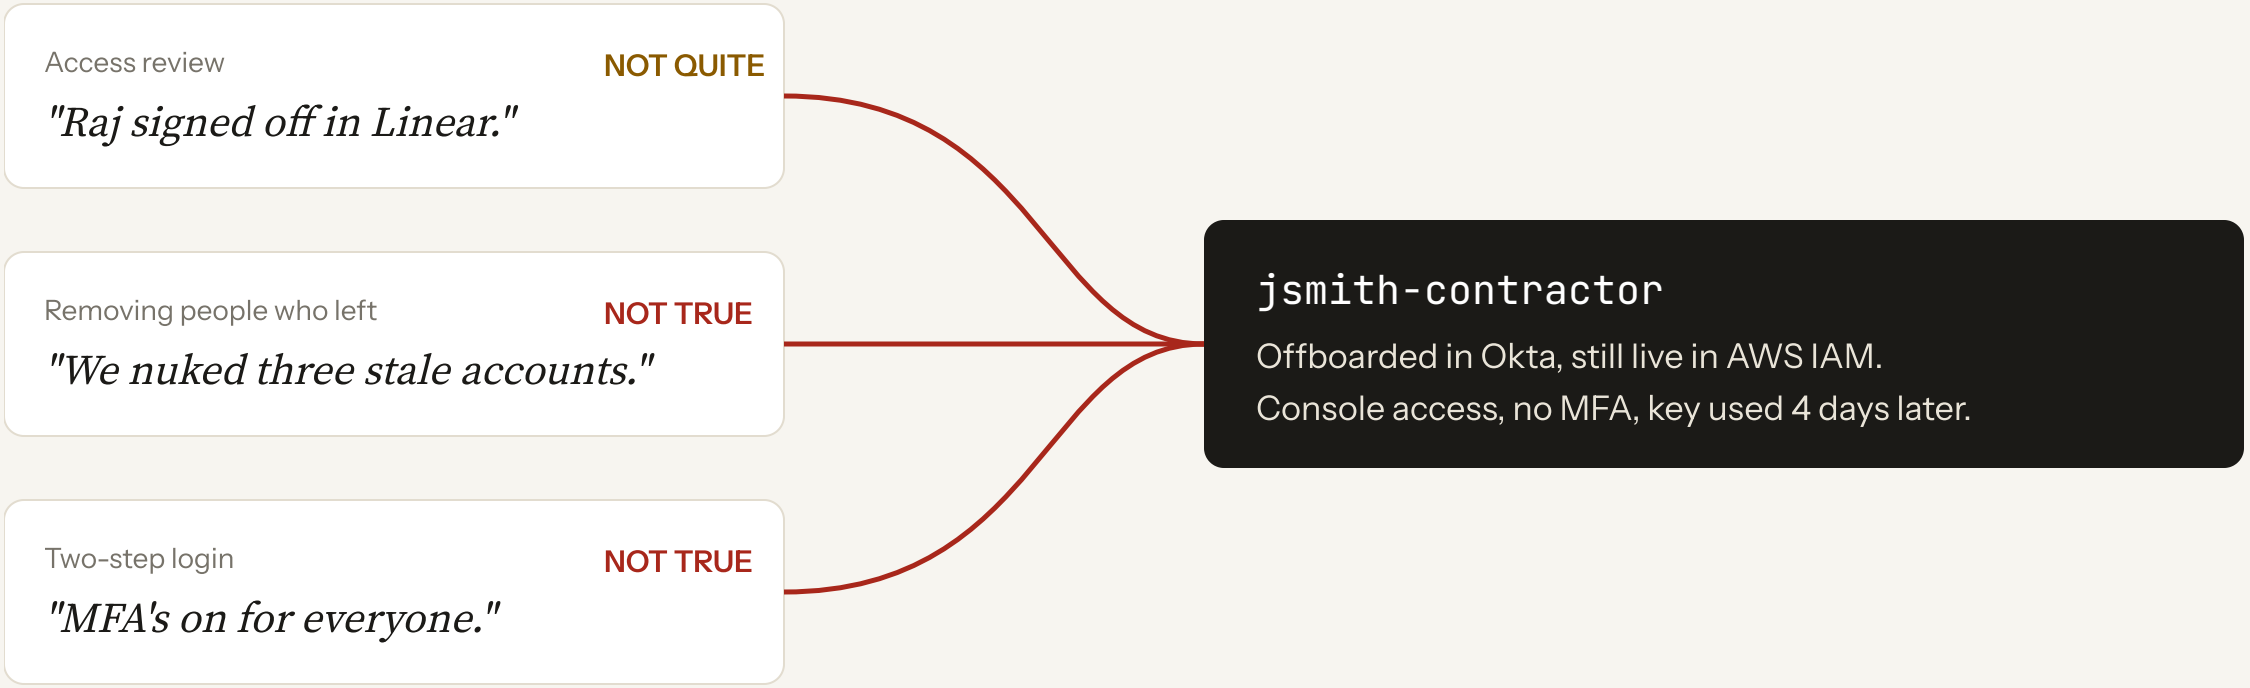

Translate + seal
every framework's dialect, signed and re-checked

When a system changes later, every claim re-verifies. If something someone said stops being true, Sworn calls them back.

Voice: Bolna (STT → LLM → TTS, live tool calls)

THE DEMO MOMENT

One forgotten account broke three statements.

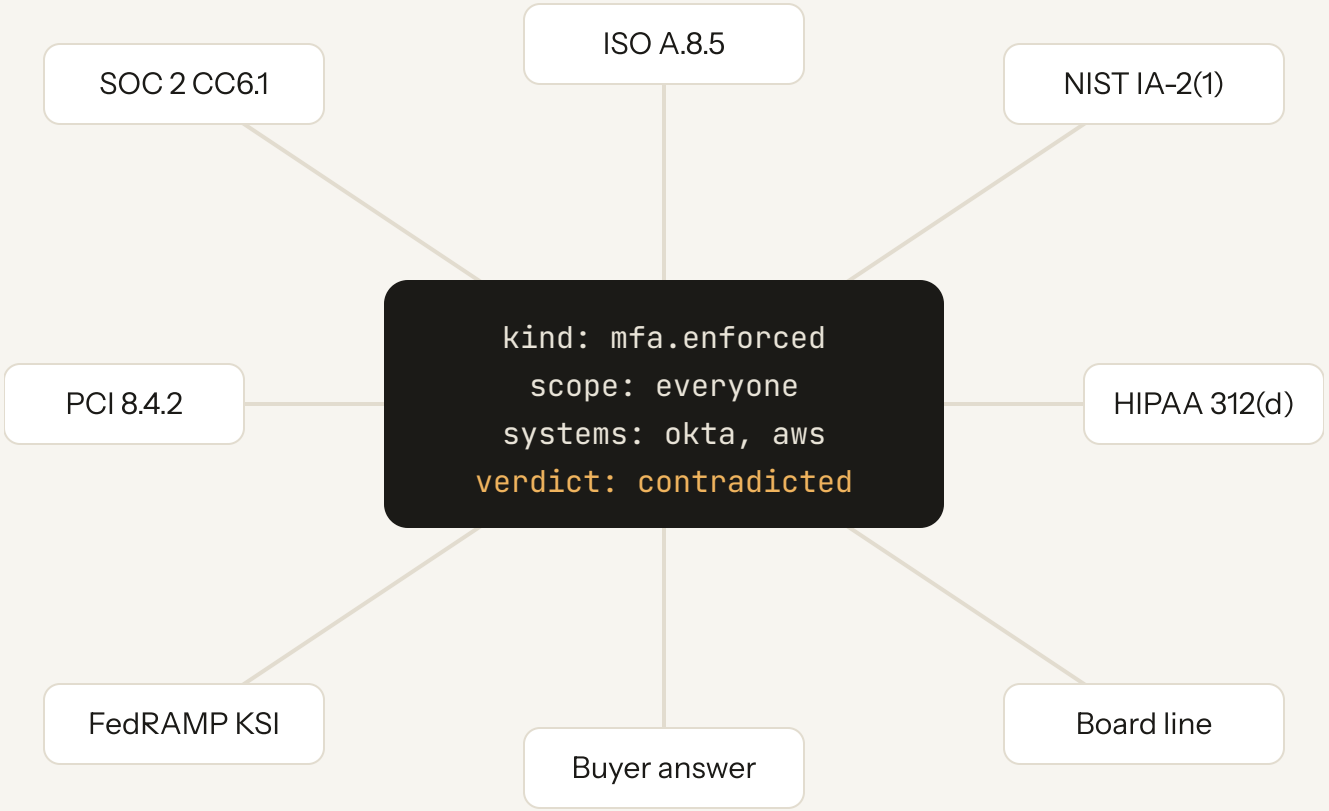

Sworn caught it on the call, logged Priya's fix, re-checked when she made it, and called her back when someone else broke it.

Try it: sworn.loxeai-evt.workers.dev (browser call or 60-second sample)

THE SECRET SAUCE

Typed claims, not text.

The model listens; the systems decide.
Voice in, typed claim out, deterministic checks against real records.

Templates speak, so nothing is invented.
Each dialect is rendered from checked facts. Inquiry is corroborated by inspection, the way audit standards require.

Signed, chained and re-checked.
Ed25519 packets anyone can verify; claims re-verify when systems change.

PCAOB AS 1105 / AICPA AT-C 205: inquiry alone is not sufficient evidence.

TARGET MARKET

Start where the audit pain is sharpest.

Beachhead. AI and SaaS companies (20 to 500 people) going through SOC 2 Type II to close enterprise deals. Engineers are scarce; every audit hour hurts.

Next. vCISOs and MSSPs who run compliance for many clients and can't sit in every walkthrough. LoxeAI already sells to them.

Then. India's 2,117 global capability centers (2.36M people) running compliance for US and EU parents, in English, Hindi or Hinglish, on Bolna.

Nasscom-Zinnov India GCC Landscape 2026.

MARKET SIZE

A fast-growing wedge inside a large market.

GRC software (TAM)

$6.5–21B

2025, depending on definition. 9 to 11% a year.

Compliance automation + questionnaires (SAM)

$1.0B → $4.3B

2025 to 2031, growing 23 to 31% a year.

Voice AI agents (tailwind)

$2.5B → $35B

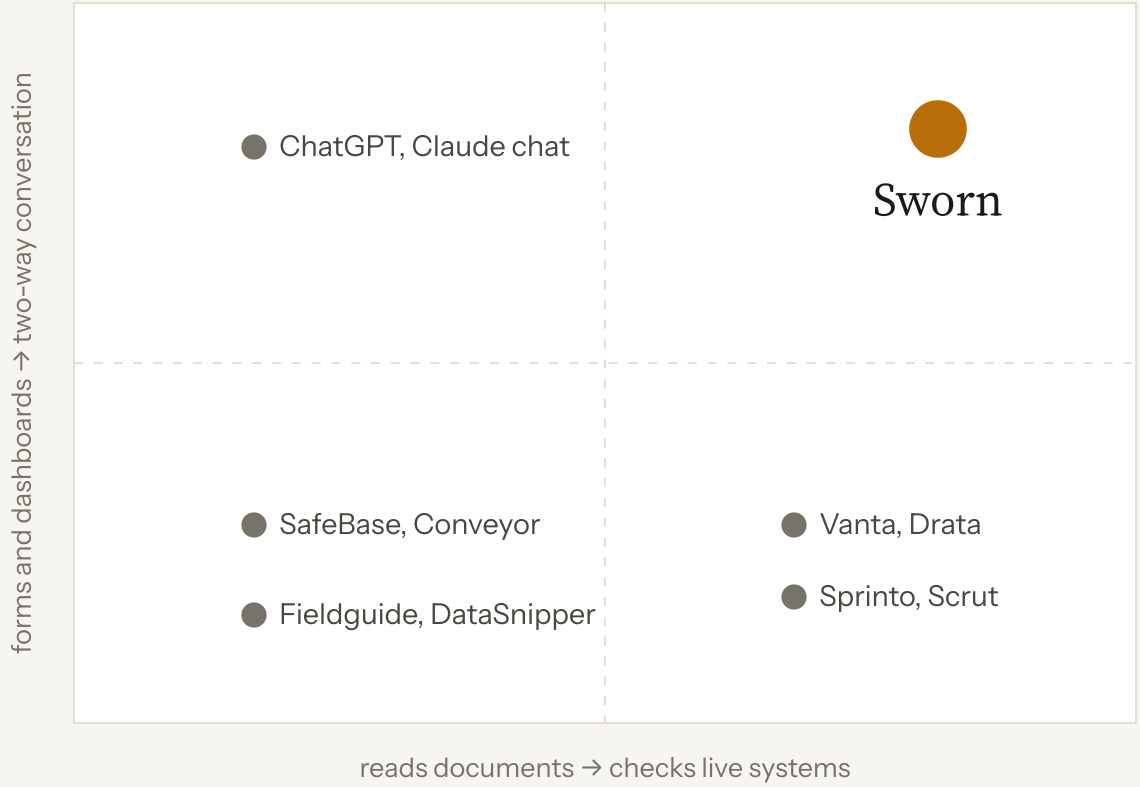

2025 to 2033, 39% a year.

30,000+ companies already pay a compliance platform (Vanta 16,000+, Drata 8,500+, Sprinto 3,000+, Scrut 2,500+). At an assumed $12k a year, that's a **$360M+** bottom-up starting market.

Verdantix, Mordor Intelligence (GRC, continuous compliance automation, questionnaire automation), Grand View Research (voice AI agents); vendor-reported customer counts. $12k ACV is our assumption.

COMPETITION

Everyone automates documents. Nobody checks what people say.

Compliance platforms pull system data but talk to people through forms and dashboards.

Trust centers answer buyers from documents, now over MCP, but never check the claims.

Chatbots rephrase words with no ground truth.

None of 25+ GRC, trust and audit vendors we reviewed ships voice.

LoxeAI competitive review, Oct 2026 (vendor sites and press).

WHY WE WIN

Hard to copy, and it compounds.

An evidence engine we already built

LoxeAI connects AWS, Okta, Google, GitHub, HR and MDM, with reperformable checks. Sworn is a voice on top of real infrastructure.

Auditor-grade by design

LoxeAI is validated by 10+ audit firms, including Prescient Security and Linford & Co. Sworn follows the evidence rules they test against.

A ledger that compounds

Every call adds verified claims and the follow-ups auditors actually ask, so each interview gets sharper.

The crosswalk

One claim, six frameworks, buyers and boards. New frameworks are new renderers, not new audits.

Open verification

Signed packets anyone can check, and an MCP endpoint ready for buyers' procurement agents.

Voice-native, multilingual

Built on Bolna from day one, ready for Hindi and Hinglish for engineers in India's GCCs.

LoxeAI is in paid pilots; 200+ customer interviews.

TEAM

Builders who already ship compliance infrastructure.

AM

Arjav Mehta

Founder and CEO

Founded LoxeAI. Northeastern University. 200+ interviews with founders, auditors and vCISOs.

K

Karthik

Co-founder and CTO

Leads LoxeAI's backend and evidence engine: connectors, checks and signed audit packages.

Compliance runs on claims. Sworn makes sure they're true.

Talk to it: sworn.loxeai-evt.workers.dev

Next: real LoxeAI connectors, SSO-signed owner attestation, Hindi and Hinglish calls, and an opt-in incident scribe for regulatory clocks.
