Sworn

Say it.
Sworn checks if it's true.

An always-on voice agent that verifies what your team says about security against what your systems actually show.

LOXEAI · BOLNA SYMPHONY BUILDATHON

WHAT SWORN IS

An agent that never stops checking whether your compliance story is still true.

ALWAYS ON

It starts the conversation.

Calls the owner of a control at quarter end, when a system changes, or when an auditor dials in. Nobody has to remember.

CONTINUOUS

It keeps checking.

Every claim is re-checked whenever Okta, AWS or GitHub change. If what someone said stops being true, Sworn calls them back.

VERIFIABLE

It proves every answer.

Each answer cites the system record behind it and is sealed with a signature anyone can check. No record, no answer.

THE PROBLEM

The same sentence. Two very different outcomes.

How it goes today

DAY 1	*"MFA is on for everyone."*
WEEK 6	Auditor samples the IAM report
WEEK 7	Exception written into the SOC 2 report
WEEK 9	Enterprise deal waits on the fix

With Sworn on the call

0:14	*"MFA is on for everyone."*
0:15	"The IAM report disagrees."
SAME DAY	Fixed, re-checked, signed

88%
of SOC 2 exams needed extra rounds of evidence requests

71%
ended with at least one exception

50%
of enterprise buyers say security review is their biggest delay after choosing a vendor

Lazarus Alliance 2026 SOC 2 benchmark (75 exams, audit-firm data); G2 2026 Buyer Behavior Report (n=1,038).

WHY NOT JUST SEND AN EMAIL?

An email collects an answer. Sworn verifies one.

	AN EMAIL OR FORM	SWORN
Getting an answer	Waits in an inbox until someone gets to it	Calls at quarter end; a 90-second conversation
Is it true?	Whatever was typed	Checked against Okta, AWS, Linear, GitHub while they talk
When it's wrong	Found weeks later, then another thread	Pushback in the same breath: "The IAM report disagrees."
Follow-up questions	One round trip per question	Asks what an auditor would ask, live
What the auditor gets	A reply someone has to translate	A signed claim in each framework's language
Next quarter	Start over	Already watching; calls back when something drifts

Voice matters because auditors already work by interview, and people explain more out loud than they ever write down. The same verified ledger also answers by text and to other agents over MCP.

WHY NOW

More frameworks, more scrutiny, and voice that finally works.

DEMAND

AI companies sell to enterprise

Every enterprise deal now opens with a security review.

LOAD

Frameworks multiply

SOC 2, ISO 27001 and 42001, the EU AI Act, DPDP, FedRAMP 20x. Same questions, new dialects.

TRUST

AI compliance got caught out

2026's evidence-fabrication allegations left auditors asking for proof, not prose.

VOICE

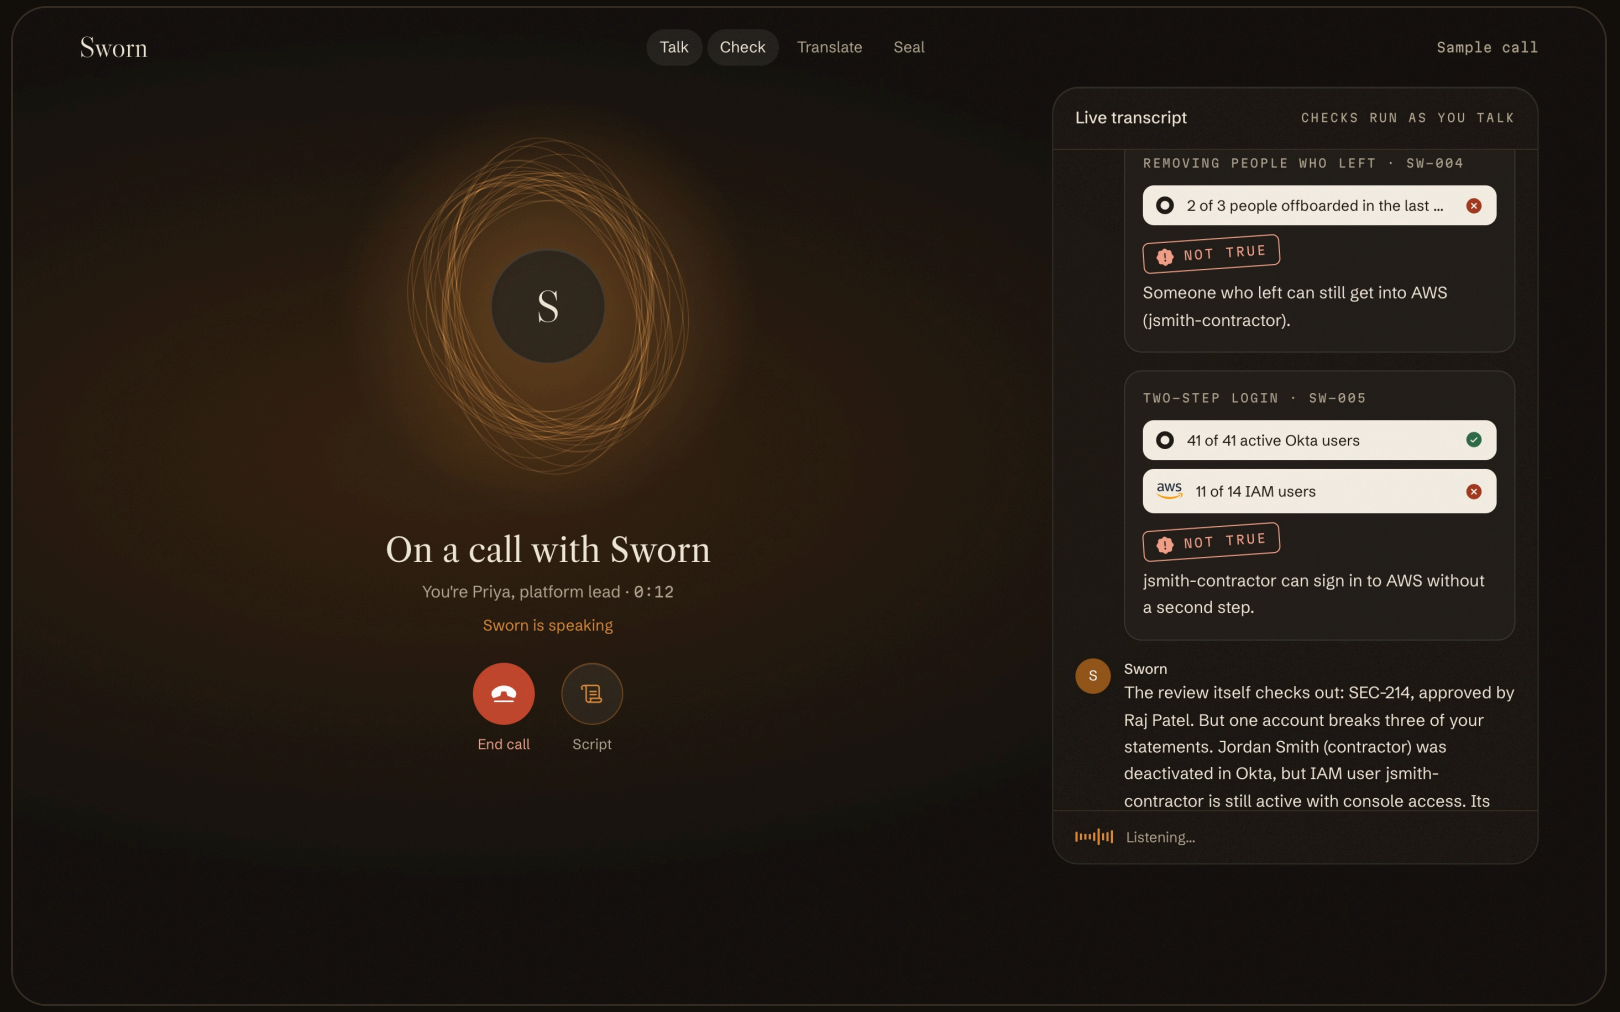

200k+

calls a day on Bolna, in 10+ languages.

Delve allegations, Mar 2026 (company denies); Bolna via TechCrunch, Jan 2026.

On the call, every claim is checked system by system.

REAL PRODUCT · SAMPLE CALL

Voice: Bolna (STT, LLM, TTS) with live tool calls into Sworn

HOW IT WORKS

What happens in the second after you speak.

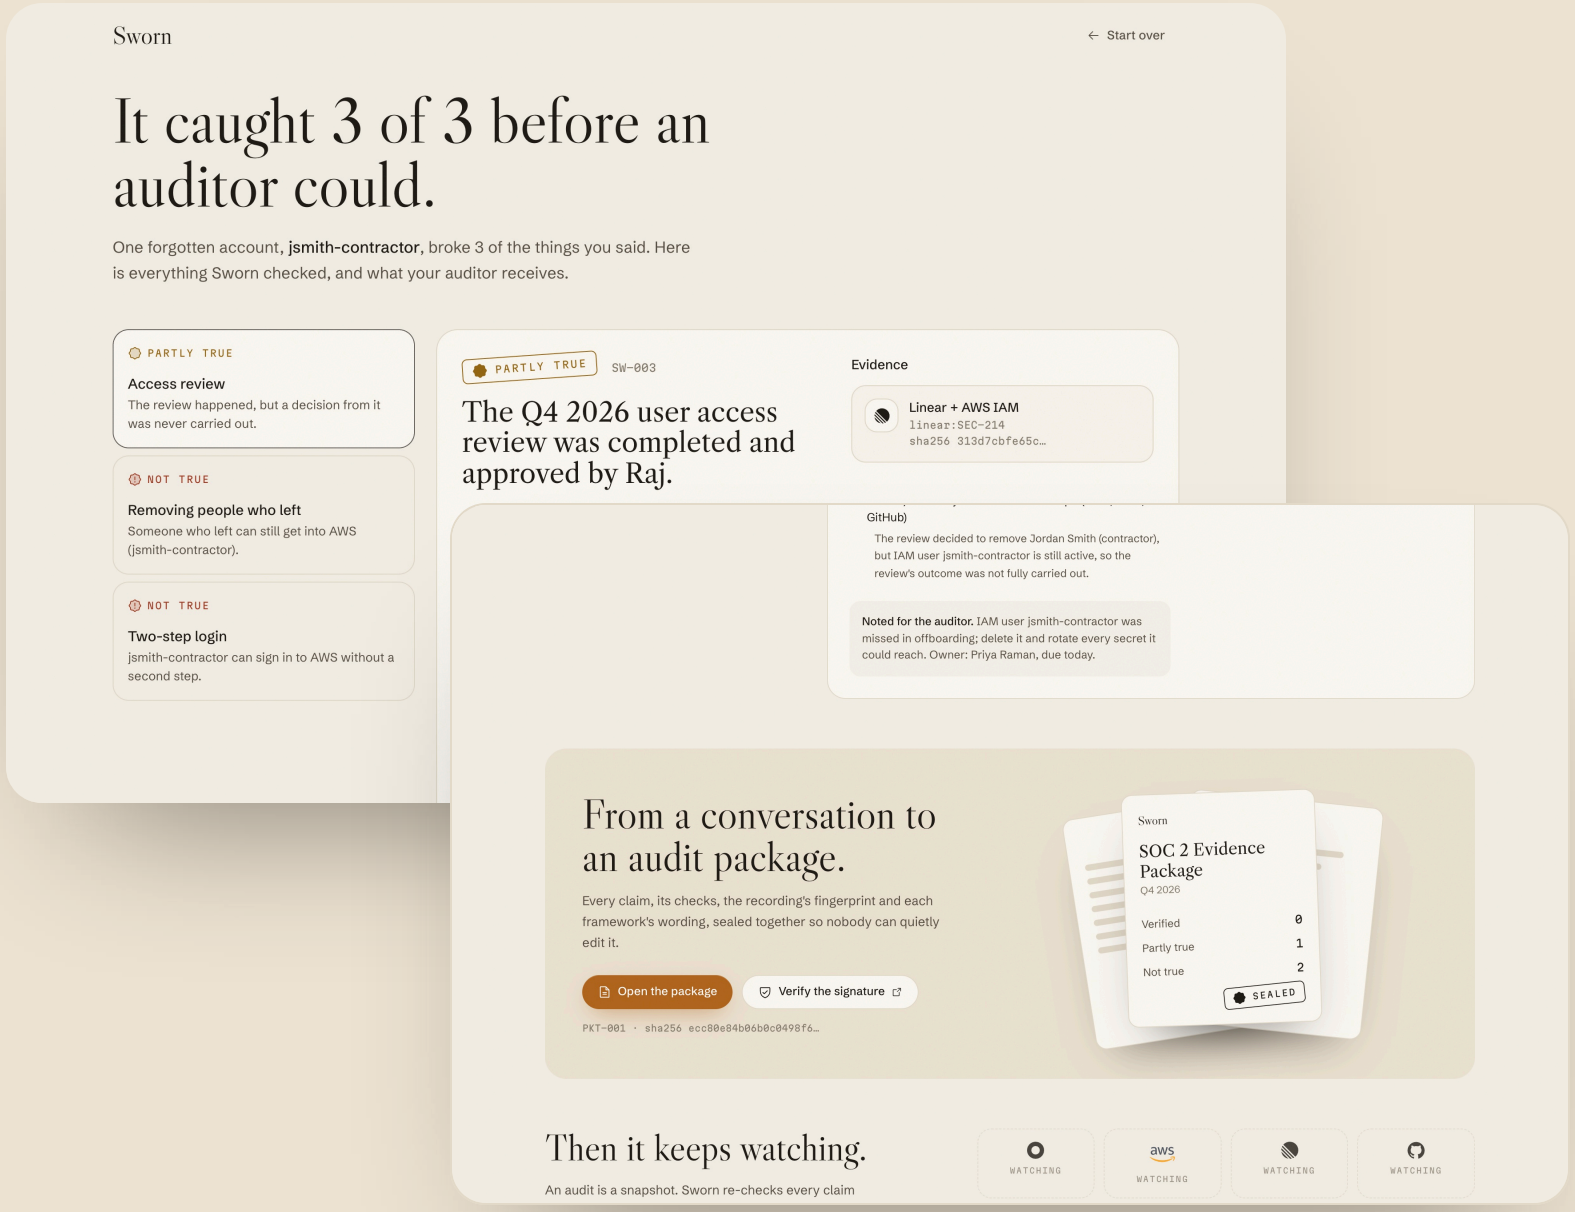

YOU SPEAK	Heard	*"MFA's on for everyone."*
+0.3 S	Typed	`mfa.enforced · everyone · okta, aws`
+0.6 S	Checked Okta	41 of 41 active people enrolled in MFA
+0.8 S	Checked AWS IAM	11 of 14 pass. jsmith-contractor left last week, no MFA. NOT TRUE
+1.1 S	Pushed back	*"Ah. The IAM report and you have a small disagreement."*
+1.4 S	Translated	SOC 2 CC6.1 · ISO A.8.5 · NIST IA-2(1) · PCI 8.4.2 · HIPAA 164.312(d)
CALL ENDS	Sealed	Ed25519 signature over the record's fingerprint

Typical timings for the checks; voice turn-taking adds about a second.

From a conversation to an audit package.

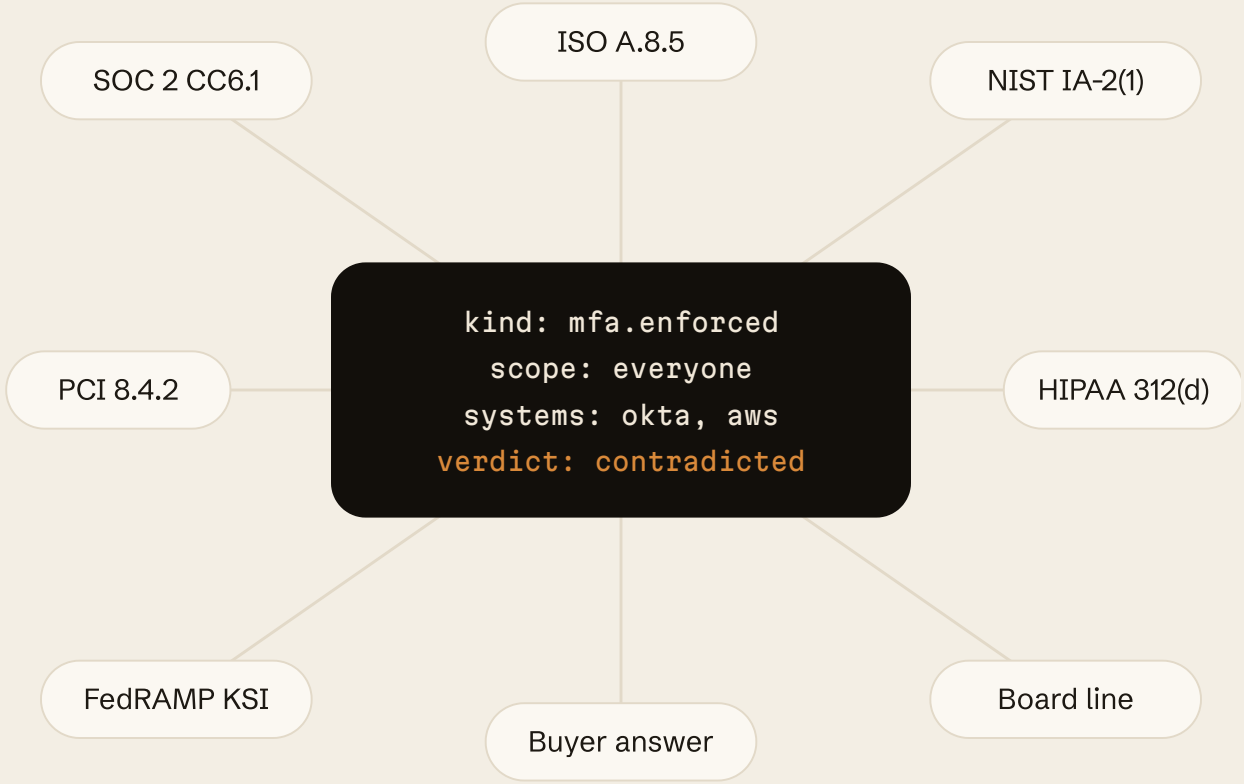

Each claim with its checks, its evidence, the owner's response and every framework's wording, sealed together.

Signing proves the record wasn't altered. The checks are what make it true.

THE SECRET SAUCE

Typed claims, not text.

The model listens; the systems decide.
Voice in, typed claim out, deterministic checks against real records.

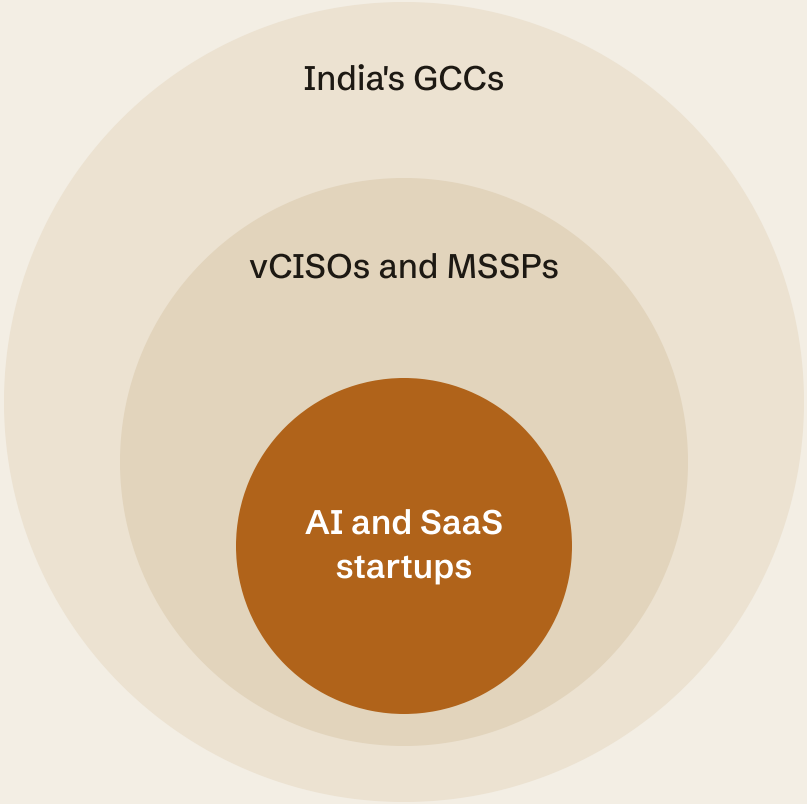

Templates speak, so nothing is invented.
Every version is written from checked facts. Inquiry is corroborated by inspection, as audit standards require.

One claim, every framework.
A new framework is a new renderer, not a new audit.

PCAOB AS 1105 and AICPA AT-C 205: inquiry alone is not sufficient evidence.

TARGET MARKET

Start where the audit pain is sharpest.

Beachhead. AI and SaaS companies of 20 to 500 people going through SOC 2 Type II to close enterprise deals.

Next. vCISOs and MSSPs who run compliance for many clients and can't sit in every walkthrough. LoxeAI already sells to them.

Then. India's 2,117 global capability centers (2.36M people) running compliance for US and EU parents, in English, Hindi or Hinglish on Bolna.

Nasscom-Zinnov India GCC Landscape 2026.

MARKET SIZE

A fast-growing wedge inside a large market.

GRC SOFTWARE · TAM

$6.5–21B

2025, depending on definition; 9 to 11% a year.

COMPLIANCE AUTOMATION + QUESTIONNAIRES · SAM

$1.0B → $4.3B

2025 to 2031, growing 23 to 31% a year.

VOICE AI AGENTS · TAILWIND

$2.5B → $35B

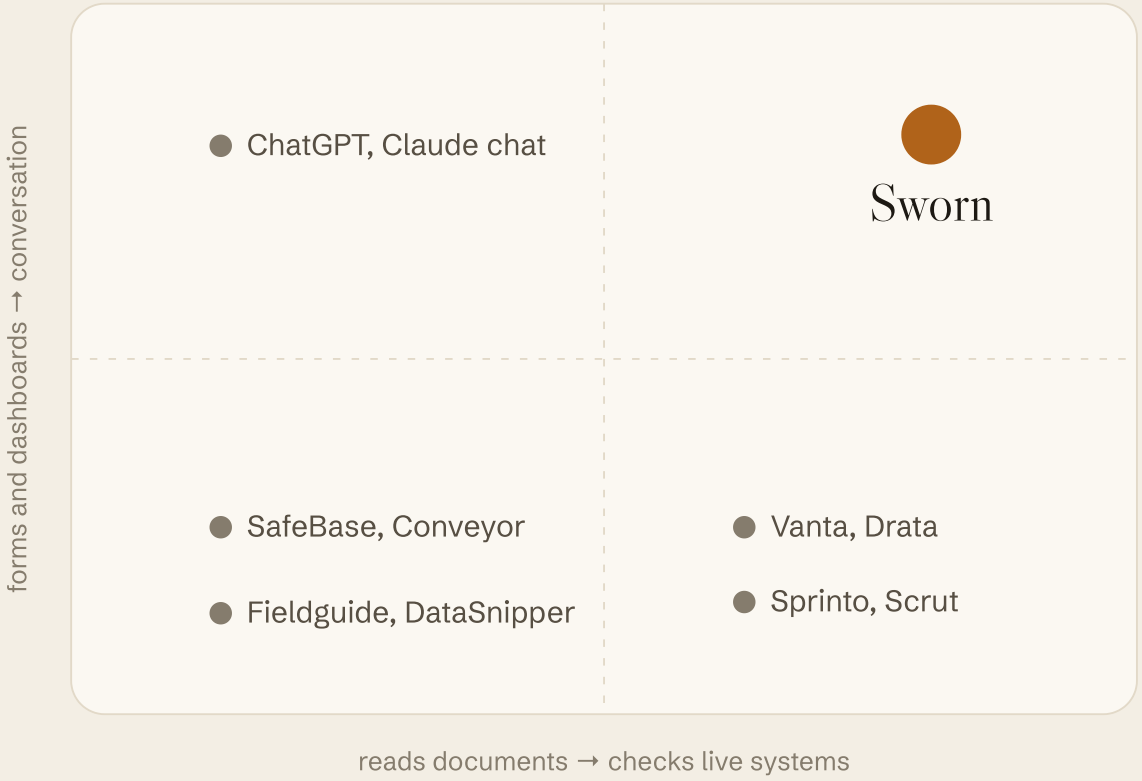

2025 to 2033, 39% a year.

30,000+ companies already pay for a compliance platform (Vanta 16,000+, Drata 8,500+, Sprinto 3,000+, Scrut 2,500+). At an assumed $12k a year, that's a **$360M+** bottom-up starting market.

Verdantix; Mordor Intelligence (GRC, continuous compliance, questionnaire automation); Grand View Research (voice AI agents); vendor-reported customer counts. $12k a year is our assumption.

COMPETITION

Everyone automates documents. Nobody checks what people say.

Compliance platforms pull system data but reach people through forms and dashboards.

Trust centers answer buyers from documents, now over MCP, but never check the claims.

Chatbots rephrase words with no ground truth.

None of 25+ GRC, trust and audit vendors we reviewed ships voice.

LoxeAI competitive review, Oct 2026 (vendor sites and press).

WHY WE WIN

Hard to copy, and it compounds.

THE MOAT

A ledger of verified claims that gets sharper with every call.

Every interview adds checked claims and the follow-ups auditors actually ask. Every system change re-tests them.

An evidence engine we already built

LoxeAI connects AWS, Okta, Google, GitHub, HR and MDM, with reperformable checks.

Auditor-grade by design

LoxeAI is validated by 10+ audit firms, including Prescient Security and Linford & Co.

Open verification

Signed packets anyone can check, and an MCP endpoint for buyers' procurement agents.

Voice-native, multilingual

Built on Bolna, ready for Hindi and Hinglish for engineers in India's GCCs.

LoxeAI is in paid pilots; 200+ customer interviews.

TEAM

Builders who already ship compliance infrastructure.

AM

Arjav Mehta

FOUNDER AND CEO

Founded LoxeAI. Northeastern University. 200+ interviews with founders, auditors and vCISOs.

K

Karthik

CO-FOUNDER AND CTO

Leads LoxeAI's backend and evidence engine: connectors, checks and signed audit packages.

Compliance runs on claims. Sworn makes sure they're true.

Talk to it: sworn.loxeai-evt.workers.dev

Next: real LoxeAI connectors, SSO-signed owner attestation, Hindi and Hinglish calls, and an opt-in incident scribe for regulatory clocks.
